

MELTING POINT

What is a Melting Point?

A melting point is the temperature at which a solid turns into a liquid! For example, the melting point of ice is 32°F.

Ice Painting Experiment

For this experiment, you'll just need some ice (we froze ours in a tupperware container) and watercolor paints & brushes. Ask your student how long they think it will take for the ice to melt. Let them paint on the ice and see what happens when the ice begins to melt! What happens to the paint?
